

Early works starting

With planning approval received and early work contracts awarded, the electrical, water and tele-communication utility relocations are now progressively taking place.

At four locations in the southern part of the alignment, we've begun relocation of some Essential Energy electricity wires from overhead to underground, as well as shifting and replacing some overhead poles and wires. We are also about to start moving Coffs Harbour City Council water main assets impacted by the bypass at Coramba.

Over the past few months we've been working with the Rural Fire Service and Council to replace the Solitary Rural Fire Brigade shed at a new location. Now the project has been approved, we've contracted local building contractor, CBuild (North Coast) Pty Ltd to start building a new facility at the Korora Hill interchange. Building the facility early in the project will ensure an uninterrupted fire service for the community as the existing building is required to be demolished to make way for the project.

The at-resident noise treatment process has also started. TfNSW have started scoping property treatments and initiating meetings with affected property owners to discuss proposed treatments. More information about at-resident noise treatments is available on the [project website](#).

The existing RFS shed is being demolished and rebuilt.

We have commenced replacing poles in the south of the alignment.
